

**William Wise** completed his PhD at the University of Leicester (UK) in 2011. Although his PhD was in organic chemistry, he subsequently changed his research direction and specialised in the biopolymer field. He conducted 3 years of post-doctoral research in the area before starting his post as a Senior Lecturer in Leather Science at The Institute for Creative Leather Technologies (University of Northampton) in May 2014. He applies his chemical knowledge to his current research, which, amongst other topics, focuses on fundamental chemistries involved in leather manufacture, material characterisation, water and waste minimisation, and novel tanning technologies.
